

Deployment Information

Your Trustgrid nodes are pre-configured and require only a few easy steps to get them online. If you have any trouble deploying the nodes, or if you have questions, reach out to Trustgrid support and we'll be happy to assist you with getting your nodes up and running ASAP.

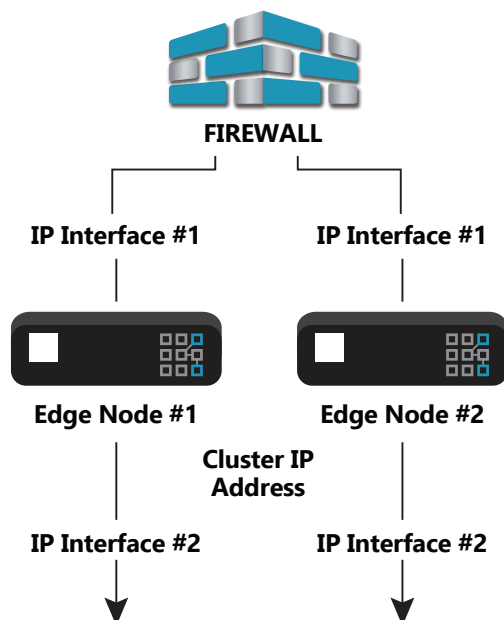

What's In The Box?

- 2x Trustgrid Nodes
- 2x Power Supplies
- 2x Network Cables

Before You Begin

- If you firewall outbound traffic to the internet, or if there will be a firewall between the nodes and your servers, please be sure that the necessary firewall rules are in place to allow traffic from the node. Please contact support with any questions regarding the necessary firewall rules.
- If your environment involves multiple VLANs, prepare the desired switch ports to allow access to the correct VLAN.

Connectivity Example

Deployment Steps

1. After unboxing the nodes, connect the network port of each node to the desired switch port.
2. Connect the power supplies for both nodes to the node and the desired power outlet.
3. Call or email Trustgrid Support (see info below) to verify device has connected to Trustgrid and installation is complete.
4. If additional assistance is required, please contact Trustgrid.

Support Information

Feel free to reach out to us with any questions - (888) 308-8995, support@trustgrid.io, or <https://trustgrid.io/support>

About Trustgrid

Trustgrid enables fast, simple, and secure connectivity to data. Quickly and securely connect applications to sensitive data sources, in real-time, anywhere, at scale. Guarantee the highest levels of security, compliance, and uptime.
